

FPLAL With-Profits Sub-Fund and Investment Summary

This guide provides a summary of how we manage the **Aviva Life & Pensions UK Limited FPLAL With-Profits Fund (the ‘Sub-Fund’)**, along with details of the asset mix and investment returns.

Your policy document will show the name of the company your policy was taken out with. If you’re unsure which with-profits sub-fund you’re invested in, you can find further details at [aviva.co.uk/ppfm](https://www.aviva.co.uk/ppfm)

Making sense of it

You may find some of the terms in this guide unfamiliar. To help, we’ve provided an explanation of the terms in **‘What does it mean?’** boxes.

There’s one main type of with-profits policy in the Sub-Fund:

Conventional with-profits policies – your investment provides a guaranteed amount (sometimes referred to as the ‘sum assured’) at maturity or on death.

There are also a number of policies in the Sub-Fund which aren’t entitled to a share in profits of the Sub-Fund (‘non-profit policies’) so don’t receive bonuses.

What's an Aviva with-profits investment?

At a glance

An Aviva with-profits investment is a low to medium risk investment that has the advantage of pooling your money with that of other investors, so you can benefit from investing in a wide spread of **assets**.

We explain assets in greater detail on page 5.

- The FPLAL With-Profits Sub-Fund is rated as a **low to medium volatility** fund.
- The Sub-Fund aims for longer-term growth by investing in a broad range of assets. We aim to provide the best possible investment returns for the benefit of policyholders generally, allowing for the level of guarantees and the amount of excess assets in the Sub-Fund.
- The value of the Sub-Fund can go down as well as up depending on the returns of the underlying mix of assets within the Sub-Funds, so you may get back less than has been paid in. We share out the profits and losses of the Sub-Fund through a system of bonuses, with the aim of smoothing the returns on your with-profits investment over the long term.
- We explain smoothing in more detail later, but basically it helps to reduce some of the significant ups and downs of investing in the stock market. We smooth the rises and falls in value by holding back some of the investment returns in good years. We then use them to top up bonuses in poor investment years. Losses made in poor investment years may also reduce returns in good investment years.
- Some products provide guaranteed policy benefits if certain events happen or on specified dates. We explain some of these guarantees in greater detail in the What are the guarantees? section on page 10.

What does it mean?

Aviva assesses its risk ratings using historical performance data.

Low to medium volatility – 3

Funds typically investing in assets like corporate bonds or a mix of assets where the day-to-day prices go up or down less than shares. There is still a risk that the value of your investment could fall.

You can find out more about our risk ratings at aviva.co.uk/retirement/fundcentre/investmentfunds/risk-ratings

Assets

An asset is a type of investment. Different types of assets include shares (equities), property, fixed interest (gilts and other bonds), alternative investments and cash/money market. Assets can rise and fall in value.

Things you need to be aware of

Investing in with-profits may not be appropriate if you:

- expect to need your money in the short term
- aren't prepared to accept any risk of losing money
- would prefer the certainty of the interest from a bank or building society savings account, which you're guaranteed to receive once it's earned.

Asset mix

At a glance

We invest your money in the FPLAL With-Profits Sub-Fund which invests in a mix of assets, including:

- shares (equities) (UK & international)
- property
- fixed interest - gilts and other bonds
- alternative investments
- cash/money market

How do we invest your money?

We invest your money into a broad mix of assets. The asset diagram below shows the type and percentage of each asset that the FPLAL With-Profits Sub-Fund invests in.

The Sub-Fund your policy invests in will always hold a mixture of higher and lower risk assets to achieve its objective.

The Sub-Fund holds a greater proportion of higher risk assets, such as **shares (equities)** and **property**. The rest is in medium and lower risk investments, such as **fixed interest (gilts and other bonds)**, **alternative investments** and **cash/money market**.

Asset mix (continued)

The performance of the different types of assets varies over time. Our fund managers may change the asset mix to:

- improve the long term performance of the Sub-Fund
- make sure that the Sub-Fund can meet its obligations.

From time to time the Sub-Fund may include investments in other Aviva group companies. However, this won't have a direct effect on the asset mix backing your policy.

We've introduced some small changes to the asset class definitions to make it clearer that there are differences between traditional and alternative investments, and to simplify the classification of fixed interest assets.

What does it mean?

Shares (equities)

Shares (or equities) are shares in companies listed on stock exchanges around the world. As shares can rise and fall in value very easily, equities are riskier than most other investments. However, they usually offer the greatest chance of higher returns over the long term. In our FPLAL With-Profits Sub-Fund the equity part of the asset mix includes equity-type assets that aren't quoted on stock exchanges.

Property

This is investment in commercial property such as shopping centres, business offices and industrial warehouses. The value of property can go down as well as up, and property may take longer to buy and sell than other types of investment.

Fixed interest - gilts

These are bonds issued by the UK government. The government pays interest on the bonds and promises to pay back the principal amount (money borrowed) at a certain point in the future. If the government defaults on a bond, the principal amount and interest will not be paid. However, gilts are regarded as less risky than corporate bonds.

Fixed interest - other bonds

This can be various types of non-gilt investments, including any corporate bonds (i.e. loans issued by companies to be paid at a point in the future) and alternative credit (including non-traditional corporate, private or emerging market debt). The value of fixed interest investments can go down as well as up. If a company defaults on a bond, the principal amount (money borrowed) and interest will not be paid. Corporate bonds are regarded as riskier than gilts.

Alternative investments

Alternative investments are assets which tend to behave differently to more traditional asset classes such as equities, bonds or property. These investments can include multi-strategy funds which seek to take advantage of investment opportunities not always found in the approach used by more traditional asset classes. Adding alternative investments to a portfolio may provide broader diversification, reduce risk and enhance returns.

Cash/money market

Cash means a range of short-term deposits – similar to a bank/building society account. Cash also includes money market securities, which are interest generating investments, issued by governments, banks and other major institutions. The value of cash and money market securities can go down as well as up.

Investment returns and market overview

The investment returns achieved by the Sub-Fund in recent years are:

	2019	2018	2017	2016	2015
before tax (pensions)	8.7%	-1.4%	7.1%	12.6%	2.1%
after tax (life/savings)	7.2%	-1.0%	6.1%	10.5%	2.0%

The investment returns above are on the whole Sub-Fund and aren't applicable to any individual policy or plan. These figures are after any deduction for investment expenses.

This is past performance. Past performance isn't a guide to the future.

Investment markets in 2019

In 2019 stock markets performed well, with many equity markets hitting all-time highs. This was largely due to declining interest rates globally as this helped keep borrowing costs low. Perceived moderation in geo-political risk was a material factor impacting market sentiment during 2019; this boosted investor confidence towards the end of the year following some resolution of the trade conflict between the US and China.

UK government bonds (gilts) and UK corporate bonds performed well, despite subdued economic conditions and uncertainty over the effects of Brexit.

The FTSE*100 Share index, a commonly used indicator of the performance of UK shares, showed a total return of 17.3% (see Note 1). UK corporate bonds returned 9.2% (see Note 2) and UK government bonds (gilts) returned 6.9% (see Note 3).

What affects how much you might get?

The amount you get back will depend on the amount you invest, plus:

- how the Sub-Fund has performed during the time you've invested with us
- the way we apply the smoothing process
- the effect of any guarantees (shown in your policy documents)
- our charges, such as administration costs, investment management fees and any financial adviser commission or charges
- any tax we pay and any future tax changes (pensions currently receive favourable tax treatment).

Smoothing – how it works

At a glance

One of the main features of a with-profits investment is that it aims to grow in value smoothly from year to year rather than being affected by the significant ups and downs of the stock market.

Over time the value of the assets held by the Sub-Fund will rise or fall. We don't change bonus rates as often as the value of the assets changes. Instead we aim to even out some of these variations in performance. This is known as smoothing. We show this with the green line in the diagram below. In contrast, the unsmoothed Sub-Fund value changes each day as the value of the assets goes up and down. This is shown by the blue line in the diagram.

The following diagram is for illustration purposes only and shows a period of positive growth overall, which isn't guaranteed.

Things you need to be aware of

There may be times in poor market conditions when smoothing can't fully protect your investment, as illustrated between points **x** and **y** in the diagram above. This can happen following a large or sustained fall in the stock markets or when investment returns are below the level we normally expect. If you leave the Sub-Fund under these circumstances, this could reduce the value of your investment. This is explained in more detail under the heading 'What happens if you leave the Sub-Fund early?'

Bonuses – how do we add the bonuses?

We share out the returns the Sub-Fund earns through a system of bonuses. There are different types of bonuses:

Regular bonus

Regular bonuses are designed to be sustainable and provide steady growth over time in the value of your investment. We decide regular bonus rates at least once a year.

Final bonus

Final bonus aims to pay any balance between the regular bonuses we've already added and the performance of the Sub-Fund over the whole period of your investment. This makes sure that you get a fair share of the return your investment has earned.

Bonuses can vary and aren't guaranteed.

Bonuses

You can usually see any regular bonus details in your yearly statement. The rate will vary over the period of your investment.

We decide the bonuses by looking at:

- how the Sub-Fund has performed in the current year
- any returns or losses from earlier years that we haven't already shared out through smoothing
- what we expect to earn in future years, and the effect of smoothing.

Regular bonus

Conventional policies

We may add regular bonuses, if any, once a year to the guaranteed amount.

Conventional with-profits policies can receive two types of regular bonus, which are added on top of the initial guaranteed amount.

This is calculated as:

- a proportion of the initial guaranteed amount; and
- a proportion of any bonuses we've added previously.

Once added, we guarantee that the regular bonus will be paid at your chosen retirement date, the policy's maturity date or on death.

Things you need to be aware of

- A regular bonus isn't the same as interest from a bank or building society.
- We don't guarantee to add a regular bonus to your investment each year. This is illustrated on the diagram on the next page at years 1, 11, 17 and 19.
- It's likely that bonuses will be smaller in poor investment years than in good years.

Bonuses – how do we add the bonuses? (continued)

Final bonus

We aim to pay a final bonus to increase the value of your policy:

- if you die
- if you transfer your pension or cash-in your policy
- at maturity, for endowments, or at your chosen retirement date, for pensions.

We normally review final bonus rates twice a year. However, we may review them more frequently if there are large changes in investment markets. Final bonus rates can change at any time, aren't guaranteed and could be zero.

This is for illustration purposes only and shows a period of positive growth overall, which isn't guaranteed. The term illustrated isn't the minimum or maximum period of investment for with-profits.

Things you need to be aware of

- The final bonus is based on the year in which you invested and the point at which you leave the Sub-Fund. It may vary depending on the returns earned over the lifetime of your investment and isn't guaranteed.
- If the investment return has been low over the period you invested, you may not receive a final bonus as you'll have already received your share of the returns through regular bonuses.
- We use a typical policy rather than individual policies when setting final bonus rates for policies issued in the same year.

What are the guarantees?

Some products provide guaranteed policy benefits if certain events happen or on dates as set out in your policy document.

For example, the event may be your policy's maturity date as agreed when you took it out. Or, for a pension policy, it may be the date you chose to retire when you started the policy. Your policy documents will set out any guarantees.

Conventional policies

At the end of your policy term or on death, we'll pay the basic guaranteed benefit as well as any regular bonus we've already added. We'll do this even if the stock market falls significantly.

Some pension policies may offer **guaranteed annuity options**. Please read your policy document to find out if this applies to you. You won't receive any guarantees if you decide to cash in your policy early.

What does it mean?

Guaranteed annuity options

Some pension policies may offer guaranteed annuity options, such as a guaranteed annuity rate. A guaranteed annuity rate is a valuable benefit, and usually means you can get a higher income from us than you could from another company.

Please read your policy document to find out if this applies to you.

Things you need to be aware of

As these guarantees are valuable, we recommend you seek financial advice before withdrawing or surrendering any benefits in the future.

What happens if you leave the Sub-Fund early?

You may decide to move some or all of your investment out of the Sub-Fund early. For example, where your policy allows, you might:

- cash-in your policy; or
- transfer to another company.

You should view with-profits investments as a long-term investment. This means leaving the Sub-Fund early may be the wrong option for you, especially if you have guarantees.

If you're considering leaving the Sub-Fund, we'd strongly suggest that you talk to your financial adviser or contact us directly. You can call us on the telephone number shown on your annual statement.

Conventional policies

If you move your money out of a conventional with-profits policy (eg. surrender before the maturity date or transfer before the selected retirement date) we'll reduce the policy's guaranteed benefits to reflect that you've paid fewer premiums and been invested in the Sub-Fund for a shorter time than we expected when you took out the policy. We may add a final bonus.

Questions and answers

What's the With-Profits Committee?

Our customers are at the heart of everything we do and we're fully committed to treating them fairly at all times.

To support this, we have a With-Profits Committee which oversees our work with independent expertise to make sure our decisions relating to with-profits investments are fair.

You can find out more about our With-Profits Committee at aviva.co.uk/wpcommittee

How are business risks managed?

The FPLAL With-Profits Sub-Fund is exposed to a number of risks. Our biggest risks come from the need to pay the guaranteed payments on all with-profits and non-profit policies when they become due.

We control the risks to the Sub-Fund by monitoring the various risk factors, and taking action to reduce our exposure to risk, for example by changing our investment strategy.

What are the estate and capital support?

Each of our with-profits sub-funds has a buffer over and above the amount needed to make pay-outs to policyholders. This buffer is known as the estate and we use this to support smoothing and guarantees and to provide security for our policyholders. We review the size of the 'buffer' in each with-profits sub-fund every year to determine whether they have additional surplus that can be shared between eligible policies.

The estate and capital support assets support the operation of with-profits policies. In particular they:

- provide us with the flexibility to invest in a wider range of assets
- provide a cushion of extra security to protect our investors when investment returns are low
- enable bonuses on with-profits policies to be smoothed.

If at any time we believe that the amount of the estate is too low then we'll take action to increase it, for example by reducing future bonus rates or changing our investment strategy. Similarly, if we believe that the amount of the estate is too high, we will take action to reduce it, for example by increasing the amount we allocate to bonuses over a period of time.

You can find out about the inherited estate distributions that are currently applying at aviva.co.uk/keepingyouinformed

Is the Sub-Fund closed to new business?

The FPLAL With-Profits Sub-Fund was closed to new business in 1995, although subject to policy conditions we still accept increments to existing policies.

How are the profits shared?

Profit from the Sub-Fund is only distributable to its with-profits policyholders in the form of bonuses added to their policies.

Where can you find out more?

We hope this guide has helped you understand how our FPLAL With-Profits Sub-Fund works.

This guide is only meant to be a summary. We also have a detailed document, called the **Principles and Practices of Financial Management (PPFM)**, which is produced in line with guidance from our regulator, the Financial Conduct Authority. You can find it and more on our website: [aviva.co.uk/ppfm/#fplal-with-profits](https://www.aviva.co.uk/ppfm/#fplal-with-profits)

If there are any differences between the information in the two guides, you should take the Principles and Practices of Financial Management as the final word.

You can see a summary of any changes to our PPFM on our website together with our yearly compliance statement.

You can also contact us for a copy of these guides or for more information by calling

0117 989 9000

Monday to Friday 9am to 5pm. Calls may be monitored and/or recorded.

Write to us at:

Aviva
PO Box 582
Bristol, BS34 9FX

You can use the link below to find out more about our Sub-Funds at:

www.aviva.co.uk/ppfm

If you have any questions about your investment you can talk to your financial adviser. They'll be able to consider your current circumstances and financial goals.

If you don't have a financial adviser, you can find one at [unbiased.co.uk](https://www.unbiased.co.uk)

Please note, your financial adviser may charge you for any advice provided.
